

STONE – Free-standing or combined

Children of all ages have always loved climbing and pulling themselves upwards.

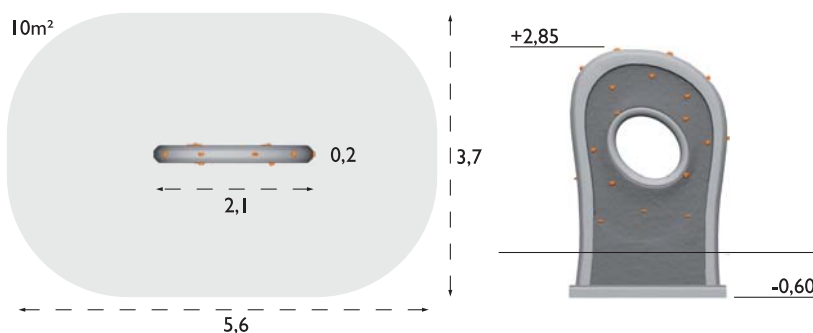

HAGS STONE is a concrete climbing feature, destined to become the real heavyweight of the playground. Sturdy grips offer a challenge to stretch the limits by climbing up, round and through the hole, or meeting at the top.

The stone's natural shape and texture make it feel like you're surmounting a smooth, soft cliff face.

HAGS STONE is the ideal free-standing feature or can be combined with a number of other play arrangements from the Agito or UniPlay series.

Stone raises playground fun to new heights and is one of the inspiring new products launched this spring.

HAGS STONE 152 376

TECHNICAL INFORMATION

Assembly: Pre-assembled

Anchoring: Sunken foundation.

Inspection/Maintenance: Each week/every season

Surface requirements: Impact-absorbing surfacing as required by EN 1176.

Materials: Climbing stone made of reinforced concrete with a natural stone-like finish. Synthetic material climbing grips. Electro-galvanised and powder-coated steel fittings.
